EXPERIENCE

Bitpanda GmbH | Full-time | Full-stack Engineer

Jan 2025 - Present

- Part of the core team, building and launching the Bitpanda DeFi Wallet from zero - ranked #1 Finance app on the App Store at launch, serving ~1,000 multi-chain trade executions/day across Solana, Polygon, and EVM chains
- Repeatedly drove the same architectural challenge: making self-custodial Web3 genuinely usable for non-crypto users: designed Bitpanda wallet connect to preserve full self-custody while abstracting seed phrase management for mainstream users; unified balance display across 8 chains; aggregated transaction history across 6 heterogeneous data providers
- Built financial infrastructure monitoring for internal treasury wallets funding user rewards and gas sponsorship - caught a critical underfunding condition before it caused user-facing claim failures

Bitpanda GmbH | Contract | Backend Engineer + Team Lead

Sep 2023 - May 2024

- Led a team to design and build DROPS (Developer Resource and Operation System) - a centralized developer portal for Bitpanda engineers, built in Java and Micronaut with PostgreSQL
- Owned project management end-to-end: structured sprints, coordinated with Bitpanda stakeholders, and drove delivery from concept to working software

Bitpanda GmbH | Intern | Full-stack Engineer

Aug 2023

- Delivered a full-stack feature end-to-end in BOSS - Bitpanda's internal operations platform used by Customer Support, Compliance, Finance, Legal, and Treasury - integrating the admin API with a new microservice and shipping permission-gated UI across 11 internal roles within a single month

Allianz Technology | Contract | Backend Engineer + Team Lead

Oct 2022 - Jun 2023

- Built a Python batch pipeline ingesting job execution data with a PostgreSQL-backed API exposing anomaly detection metrics to downstream consumers

dox42 GmbH | Intern | DevOps Engineer

Jul 2022

- Inherited a legacy .NET Framework 4 codebase with zero CI/CD and no standard tooling support - diagnosed the constraint, provisioned a dedicated Microsoft build server as a bridge, and delivered a working automated pipeline where off-the-shelf solutions had failed.

Kontron AG | Contract | Lead Frontend Engineer

Sep 2021 - Jun 2022

- Delivered a tender filtering and management dashboard in TypeScript and Angular - replaced a manual process and gave procurement teams real-time visibility into incoming tenders and relevance scoring

Climate Science Ltd | Volunteer | Frontend Engineer

Oct 2021 - Dec 2022

- Volunteer contributor to a Climate change awareness NGO. Helping with the migration from Angular/Firebase to Next.js alongside a distributed team of engineers

EDUCATION

HTL Spengergasse | Higher Technical College

- Diploma in Informatics with English as a working language.
- High Potential Program member

Diploma Thesis - Architecture and Scalable Development of an Integrated Software Catalogue

Broader architectural study covering Domain-Driven Design, monolith vs microservices tradeoffs, layered architecture and persistence patterns
